ODA-KIL 369

DOES WHAT IT SAYS.
AUTOMATICALLY!

Oda-kil does not mask the odours, it destroys them, never to return.

ODA-KIL is an environmentally friendly UVC Ozone Generator. Its attractive stainless steel cabinet is durable, lightweight and portable and is the ideal deodorizing unit for all Hospitality, Health and Residential areas.

HOW DOES IT WORK?

A fan draws the air into the cabinet where it is irradiated by a UVC/Ozone Lamp which produces Ozone[O³] in the air. This air containing Ozone is then exhausted through the outlet and back into the room where it destroys the odour producing molecules.

Whether biological, organic or chemical, Ozone has the ability to destroy these molecules and converting them to Oxygen and itself reverting back to Oxygen.

WHERE CAN IT BE USED?

Oda-kil may be used anywhere indoors but it must be in UNOCCUPIED areas. It will destroy all smells regardless of their creation.

Oda-kil is a maintenance free unit requiring only annual lamp replacement.

THE BENEFITS

- Note that the Oda-kil 369 is a PORTABLE AIR RECIRCULATING UNIT.
- DIRECT IRRADIATION OF UVC ULTRA-VIOLET will be needed to effectively treat Mould and Mildew, HVAC Coils & Ducts & Operating Theatres. Also rooms

which have housed patients with MDRO Multi Drug Resistant Organisms, especially Golden Staph, need to be effectively sanitized before admission of a new patient.

- MRSA Methicillin [antibiotic drug] -Resistant Staphylococcus

Aureus [Golden Staph] is a deadly organism which, can be fatal but can be eliminated by direct irradiation of UVC. Areas being treated with direct irradiation must be UNOCCUPIED. Refer to Models SANIRAY, SANILIGHT and SANIDYNE which are designed for use in this application of UVC.

SPECIFICATIONS

ODA-KIL OK8

Length	310 mm
Width	190 mm
Height	70 mm
Lamp	GPH287T5VH

ODA-KIL MODEL OK369

Length	675 mm
Width	175 mm
Height	78 mm
Height with handle	116 mm
Capacity	160 CU. metres hour
